Ava grew up in a poor family in London before marrying Cesare, an Italian millionaire. Despite their totally different upbringings, the two fell in love at first sight. When Ava got pregnant, they decided it was time to get married, and Ava put her career on hold. The two of them should be living in conjugal bliss, but their marriage has been rocky from the start?Cesare spends too little time with his family and buries himself at work, treating Ava coldly when she tries to talk to him about it. Ava, convinced that he doesn't love her anymore, knows they need some time apart. And yet, when they meet again after some time has passed, a sad-looking Cesare gazes at her with hungry eyes and tries to kiss her. Is it really love...or only lust?

Owner of the Espiritu racing team, tycoon Marco de Cervantes thinks he knows exactly what's going on inside Sasha Fleming's pretty little head... She's clearly not above using her wide-eyed beauty and tempting curves to become Espiritu's first female racing driver. The infuriating thing is — she's the best driver around! Marco's willing to reap any rewards...on and off the track...but he couldn't be more wrong about Sasha. Unlike the socialites that flock round him she has no interest in being a billionaire's trophy wife — and she wills her body to prove this to him. But success always comes at a price! Mills & Boon Modern — Escape to exotic locations where passion knows no bounds.

A follow-up to Cyador's Heirs finds Cigoerne's Mirror Lances commander Lerial leading three troops on a mission to protect Afrit and Cigerne from a Heldya invasion, an effort that is complicated by Lerial's troubled past.

Destined to command his future ruler brother's defense army, Lerial, the second son of Duke Kiedron, discovers during his training that he has a rare power to harness both Order and Chaos. By the best-selling author of Heritage of Cyador. 50,000 first printing

This collection of connected ghost stories from the author of Europe Central includes tales about a farmer's deceased wife who returns, a geisha who becomes a cherry tree and a man who romances the ghost of his high school girlfriend.

Dealing with the volume, complexity, and diversity of data currently being generated by scientific experiments and simulations often causes scientists to waste productive time. Scientific Data Management: Challenges, Technology, and Deployment describes cutting-edge technologies and solutions for managing and analyzing vast amounts of data, helping scientists focus on their scientific goals. The book begins with coverage of efficient storage systems, discussing how to write and read large volumes of data without slowing the simulation, analysis, or visualization processes. It then focuses on the efficient data movement and management of storage spaces and explores emerging database systems for scientific data. The book also addresses how to best organize data for analysis purposes, how to effectively conduct searches over large datasets, how to successfully automate multistep scientific process workflows, and how to automatically collect metadata and lineage information. This book provides a comprehensive understanding of the latest techniques for managing data during scientific exploration processes, from data generation to data analysis. Enhanced by numerous detailed color images, it includes real-world examples of applications drawn from biology, ecology, geology, climatology, and more. Check out Dr. Shoshani discuss the book during an interview with International Science Grid This Week (iSGTW): <http://www.isgtw.org/?pid=1002259>

This book constitutes the refereed proceedings of the 35th International Conference on High Performance Computing, ISC High Performance 2020, held in Frankfurt/Main, Germany, in June 2020.\* The 27 revised full papers presented were carefully reviewed and selected from 87 submissions. The papers cover a broad range of topics such as architectures, networks & infrastructure; artificial intelligence and machine learning; data, storage & visualization; emerging technologies; HPC algorithms; HPC applications; performance modeling & measurement; programming models & systems software. \*The conference was held virtually due to the COVID-19 pandemic. Chapters "Scalable Hierarchical Aggregation and Reduction Protocol (SHARP) Streaming-Aggregation Hardware Design and Evaluation", "Solving Acoustic Boundary Integral Equations Using High Performance Tile Low-Rank LU Factorization", "Scaling Genomics Data Processing with Memory-Driven Computing to Accelerate Computational Biology", "Footprint-Aware Power Capping for Hybrid Memory Based Systems", and "Pattern-Aware Staging for Hybrid Memory Systems" are available open access under a Creative Commons Attribution 4.0 International License via [link.springer.com](http://link.springer.com).

Nurses in general practice are increasingly taking on advanced roles, involving the assessment, treatment and management of minor illness. They also supervise chronic disease management, particularly the monitoring of diabetes, hypertension, respiratory disease, primary and secondary CHD prevention, stroke and transient ischaemic attacks. This invaluable new handbook provides a concise outline of the origins and continuing development of the advanced nurse practitioner role and a highly practical guide to setting up a minor illness clinic. It then offers recommendations on patient history taking and outlines the multitude of conditions likely to present in the minor illness clinic. Each condition is defined in a consistent format for quick, easy reference, with an introduction, clues for aiding in diagnosis, pathophysiology, differential diagnosis, prescribing issues, clinical complications and key messages. It also includes specific chapters detailing classes and selection of antibiotics and understanding blood results. The *Minor Illness and Beyond Handbook* is the ultimate guide for all nurses in general practice needing a concise, easy-to-read information source for daily reference. It is also highly recommended for nurses new to their role, as well as nursing students.

From the Foreword: "The authors of the chapters in this book are the pioneers who will explore the exascale frontier. The path forward will not be easy... These authors, along with their colleagues who will produce these powerful computer systems will, with dedication and determination, overcome the scalability problem, discover the new algorithms needed to achieve exascale performance for the broad range of applications that they represent, and create the new tools needed to support the development of scalable and portable science and engineering applications. Although the focus is on exascale computers, the benefits will permeate all of science and engineering because the technologies developed for the exascale computers of tomorrow will also power the petascale servers and terascale workstations of tomorrow. These affordable computing capabilities will empower scientists and engineers everywhere." — Thom H. Dunning, Jr., Pacific Northwest National Laboratory and University of Washington, Seattle, Washington, USA "This comprehensive summary of applications targeting Exascale at the three DoE labs is a must read." — Rio Yokota, Tokyo Institute of Technology, Tokyo, Japan "Numerical simulation is now a need in many fields of science, technology, and industry. The complexity of the simulated systems coupled with the massive use of data makes HPC essential to move towards predictive simulations. Advances in computer architecture have so far permitted scientific advances, but at the cost of continually adapting algorithms and applications. The next technological breakthroughs force us to rethink the applications by taking energy consumption into account. These profound modifications require not only anticipation and sharing but also a paradigm shift in application design to ensure the sustainability of developments by guaranteeing a certain independence of the applications to the profound modifications of the architectures: it is the passage from optimal performance to the portability of performance. It is the challenge of this book to demonstrate by example the approach that one can adopt for the development of applications offering performance portability in spite of the profound changes of the computing architectures." — Christophe Calvin, CEA, Fundamental Research Division, Saclay, France "Three editors, one from each of the High Performance Computer Centers at Lawrence Berkeley, Argonne, and Oak Ridge National Laboratories, have compiled a very useful set of chapters aimed at describing software developments for the next generation exa-scale computers. Such a book is needed for scientists and engineers to see where the field is going and how they will be able to exploit such architectures for their own work. The book will also benefit students as it provides insights into how to develop software for such computer architectures. Overall, this book fills an important need in showing how to design and implement algorithms for exa-scale architectures which are heterogeneous and have unique memory systems. The book discusses issues with developing user codes for these architectures and how to address these issues including actual coding examples." — Dr. David A. Dixon, Robert Ramsay Chair, The University of Alabama, Tuscaloosa, Alabama, USA
