There are countless studies that prove the important health benefits associated with exercise, and it becomes more important as we age.

Population aging and the associated burden of chronic diseases are one of the main challenges in public health worldwide. This Research Topic on "Active Aging and Disease Management" provides a comprehensive overview of population aging through fourteen comprehensive papers. Chapter 1 discusses an overview of health systems in active and healthy aging, while Chapter 2 focuses on the role of lifestyles, exercise and new technologies. Chapter 3 debates psychological and cognitive issues in aging and finally in Chapter 4, an older people self assessment is proposed and the role of communities and supporters are highlighted. We think that real social and health care integration at community level could be the key point to deliver effective health promotion and preventive intervention. Enjoy the reading!

The president of New York's Mount Sinai Hospital and a professor of public health present the findings of a MacArthur Foundation study showing that healthy aging is dependent on diet, exercise, and self-esteem rather than genes

The challenge of population aging requires innovative approaches to meet the needs of increasing numbers of older people. Emerging information and communication technologies (ICTs), such as pervasive computing and

ambient assistive technology, have considerable potential for enhancing the quality of life of many older people by providing additional safety and security while also supporting mobility, independent living, and social participation. The proposed book will be a landmark publication in the area of technology and aging that will serve as a statement of the current state-of-the-art and as a pointer to directions for future research and emerging technologies, products, and services.

Finding the right fit to match aging adults with the best caregiver to assist them in their home can be fraught with challenge. In today's pressurized world, the process involves overstressed family members and a shortage of great caregivers. So many adult children are seeking a helping hand and a friendly, experienced voice to guide them through this emotionally charged rite of passage. *Aging with Care: Your Guide to Hiring and Managing Caregivers in the Home*, takes a personal, professional, and sometimes humorous approach to the challenges, benefits, pitfalls and problems of hiring in-home caregivers. Here, two geriatric care experts explore the essential credentials and experience a home caregiver should have, pitfalls to avoid, hiring options and managing costs, and the decisions that go into finding the right fit for your loved one to be able to age in place. Sharing stories and insights from interviews with caregivers and elders, as well as industry experts, they walk you through the ins and outs, and provide you with the tools necessary to making the best care choices you can for the ones you love.

Societies across Europe and Central Asia are aging, but people are not necessarily living longer. This demographic trend-caused by a decrease in fertility rather than improved longevity-presents both challenges and opportunities for governments, the private sector, and individuals alike. Some of the challenges are well known. Output per capita becomes smaller if it is shared with an increasingly larger group of dependent older people. At a certain point, there may not be sufficient resources to maintain the living standards of this older group, especially if rising expenditures on health care, long-term care, and pensions must be financed through the contributions and taxes paid by ever-smaller younger age groups. Working adults also contribute the most to the pool of savings. As the size of this group shrinks, savings will decline. But these challenges can be transformed into opportunities. Consider these examples: As longevity increases, workers tend to stay in the workforce longer, and, with the right incentives, they will increase their savings. Many current workers, and perhaps even more in the future, will thus not necessarily become dependent once they turn 65. And with slower population growth and smaller young age groups, societies will have an opportunity to improve the quality of education and maintain productivity. Firms in some countries are already adapting by capitalizing on skills that appreciate with age. Cardiovascular diseases account for more than half the difference in life expectancy (above age 50) between the region and Western Europe for men and 75 percent of the corresponding difference for women. Healthier behavior and health systems focused on preventive care could, with no cost increase, dramatically reduce this risk. These opportunities are not to be missed. As populations age, public discourse ranges from concerns about economic decline and fiscal sustainability of pensions and health systems to optimism about opportunities for healthier and more productive aging. The main contribution of *Golden Aging* is perhaps to show that demography and its consequences are not fixed. Much will depend on how people, firms, and societies adapt and how policy makers and institutions facilitate their behavioral adjustments. The future for Europe and Central Asia does not have to be gray-it can be a golden era of healthy, active, and prosperous aging.

This book provides multinational evidence on active and healthy ageing. It generates authoritative new knowledge for mutual learning and policymaking in addressing challenges linked with population ageing. The authors discuss how to achieve better active ageing outcomes through appropriate policies including addressing life course determinants of active and healthy ageing. The chapters are distinctive in their focus on quantitative analysis of active and healthy ageing based on a first-of-its-kind composite measure, the Active Ageing Index developed during the 2012 European Year for Active Ageing and Solidarity between Generations. Contributors include researchers, civil service representatives, policymakers and other stakeholders from national, regional and European organisations. This edited volume provides a multidisciplinary resource for academics and policy makers in various areas of the social sciences, especially those studying population ageing and its consequences, economists, sociologists, social policy analysts and public health experts.

This book weaves all of these factors together to engage in and promote medical, biomedical and psychosocial interventions, including lifestyle changes, for healthier aging outcomes. The text begins with an introduction to age-related changes that increase in disease and disability commonly associated with old age. Written by experts in healthy aging, the text approaches the principles of disease and disability prevention via specific health issues. Each chapter highlights the challenge of not just increasing life expectancy but also decreasing disease burden and disability in old age. The text then shifts into the whole-person implications for clinicians working with older patients, including the social and cultural considerations that are necessary for improved outcomes as Baby Boomers age and healthcare systems worldwide adjust. *Healthy Aging* is an important resource for those working with older patients, including geriatricians, family medicine physicians, nurses, gerontologists, students, public health administrators, and all other medical professionals.

This book presents an analysis of active ageing and physical activity from a multidisciplinary perspective. With descriptions of exercises, adequately illustrated with pictures, this book shows that regular physical activity reduces the prevalence of chronic diseases associated with ageing, as well as the risk of morbidity and mortality of the elderly. It confirms that exercise programs minimize the psychomotor decline, prevent the loss of functionality, inability and dementia, and foster significant gains in health and well-being, leading to increased quality of life of the elderly.

Don't let the ominous perception of "aging" a lack of purpose, feeling irrelevant and under-used, having nothing to do take control of you and your life. You have the power to change how you grow older. This book will show you how. Renowned psychotherapist and aging expert Andrea Brandt, PhD, MFT, helps you throw out the old stereotypes about getting older and move toward the welcoming new evidence that your future is alive with possibility, providing steps to thrive today and into your golden years. Join the millions who are becoming mindful about aging, and discover the secrets to creating a life that doesn't wane as the years go by. *Mindful Aging* will forever change how you view and embrace your life as you age.
