The Company almost owns your very soul it seems as the drones watch your every move, while you struggle to keep your family's lights and water on, meanwhile watching the price of the power rise bill to bill. It's a dark world only 10 years in the future. This is the world Stuart Pauls sees predicted by his machines,

sees in his PLENZES.

Stuart's machines tell him he is the programmer with the ultimate solution that can stave off this bleak decade only he can imagine. As 2014 comes to an end, Stuart is locked in a race with the big five of computing, struggling to be the one to deliver the first augmented reality contact lens. He begins to fold under the pressure, the endless coding and his never ending failures as the lenses?dubbed PLENZES?begin to take shape and functionality. Stuart slowly succumbs to the paranoia, desperation and maybe a little too much time alone

Despite popular forays into augmented and virtual reality in recent years, spatial computing still sits on the cusp of mainstream use. Developers, artists, and designers looking to enter this field today have few places to turn for expert guidance. In this book, Erin Pangilinan, Steve Lukas, and Vasanth Mohan examine the AR and VR development pipeline and provide hands-on practice to help you hone your skills. Through step-by-step tutorials, you'll learn how

to build practical applications and experiences grounded in theory and backed by industry use cases. In each section of the book, industry specialists, including Timoni West, Victor Prisacariu, and Nicolas Meuleau, join the authors to explain the technology behind spatial computing. In three parts, this book covers:

Art and design: Explore spatial computing and design interactions, human-centered interaction and sensory design, and content creation tools for digital art

Technical development: Examine differences between ARKit,
