The past decade has witnessed a decline in saving throughout the developed world—the United States has the dubious distinction of leading the way. The consequences can be serious. For individuals, their own economic security and that of their families is jeopardized. For society,

inadequate rates of saving have been blamed for a variety of ills—decreasing the competitive abilities of American industry, slowing capital accumulation, increasing our trade deficit, and forcing the sale of capital stock to foreign investors at bargain prices. Restoring acceptable rates of saving in the United States poses a major challenge to those who formulate national economic policy, especially since economists and policymakers alike still understand little about what motivates people to save. In *National Saving and Economic Performance*, edited by B. Douglas Bernheim and John B. Shoven, that task is addressed by offering the results of new research, with recommendations for policies aimed to improve saving. Leading experts in diverse fields of economics debate the need for more accurate measurement

of official saving data; examine how corporate decisions to retain or distribute earnings affect household-level consumption and saving; and investigate the effects of taxation on saving behavior, correlations between national saving and international investment over time, and the influence of economic growth on saving. Presenting the most comprehensive and up-to-date research on saving, this volume will benefit both academic and government economists.

Over the last forty years, the majority of states have adopted consumer education policies, and a sizable minority have specifically mandated that high school students receive instruction on topics related to household financial decision-making (budgeting so forth). In this paper, we attempt to determine whether the curricula arising from these mandates have had any discernable effect on adult decisions regarding saving. Using a unique household survey, we exploit the variation in requirements both across states and over time to identify the effects of interest. The evidence indicates that mandates have significantly raised both exposure to financial

Handbook of Behavioral Economics: Foundations and Applications presents the concepts and tools of behavioral economics. Its authors are all economists who share a belief that the objective of behavioral economics is to enrich, rather than to destroy or replace, standard economics. They provide authoritative perspectives on the value to economic inquiry of insights gained from psychology. Specific chapters in this first volume cover reference-dependent preferences, asset markets, household finance, corporate finance, public

In recent years, the United States has witnessed significant growth in programs of financial and retirement education in the workplace. This phenomenon provides an opportunity to assess the effects of targeted education programs on financial choices. This paper uses a novel household survey to develop econometric evidence on the efficacy of employer-based financial education. While our primary focus concerns the effects of these programs on saving (both in general and for the purposes of retirement), we also examine a number of collateral issues. These include the circumstances under which employers offer, and employees participate in, financial education programs, and the effects of these programs on sources of information and advice concerning retirement

planning. Our findings indicate that employer-based retirement education strongly influences household financial behavior.

The eight chapters in this volume fall into three subject areas: government budget management and control, federal entitlement programs, and attempts to influence private sector behavior through tax code management. Policymakers are often hard-pressed to understand what economists have to say on policy issues, and scholars and students need to know what the latest research findings are and what questions remain unanswered. *Fiscal Policy: Lessons from Economic Research* presents the work of leading contributors to the public finance literature. The papers were originally presented

at a 1996 conference sponsored by the Robert D. Burch Center for Tax Policy and Public Finance at the University of California, Berkeley. Although the papers are broad in scope, they are not intended to be neutral, comprehensive surveys of the literature. Instead, authors were encouraged to focus on the issues they thought most important or interesting. The conference confirmed that on some questions there is a broad consensus, and on others there is strong disagreement. Because perspectives differ, after each paper two discussants offer their own views on the subject. More so than in many conference volumes, these comments are an integral part of each presentation.
