As in previous editions, the focus in BASIC COLLEGE MATHEMATICS: AN APPLIED APPROACH remains on the Aufmann Interactive Method (AIM). Students are encouraged to be active participants in the classroom and in their own studies as they work through the How To examples and the paired Examples and You Try It problems.

As in previous editions, the focus in BASIC COLLEGE MATHEMATICS: AN APPLIED APPROACH remains on the Aufmann Interactive Method (AIM). Students are encouraged to be active participants in the classroom and in their own studies as they work through the How To examples and the paired Examples and You Try It problems. The role of active participant is crucial to success. Presenting students with worked examples, and then providing them with the opportunity to immediately work similar problems, helps them build their confidence and eventually master the concepts. To this point, simplicity plays a key factor in the organization of this edition, as in all other editions. All lessons, exercise sets, tests, and supplements are organized around a carefully-constructed hierarchy of objectives. This objective-based approach not only serves the needs of students, in terms of helping them to clearly organize their thoughts around the content, but instructors as well, as they work to design syllabi, lesson plans, and other administrative documents. The Ninth Edition features a new design, enhancing the Aufmann Interactive Method and the organization of the text around objectives, making the pages easier for both students and instructors to follow. Important Notice: Media content referenced within the product description or the product text may not be available in the ebook version.

The Student Support Edition of Basic College Mathematics, 8/e, brings comprehensive study skills support to students and the latest technology tools to instructors. In addition, the program now includes concept and vocabulary review material, assignment tracking and time management resources, and practice exercises and online homework to enhance student learning and instruction. With its interactive, objective-based approach, Basic College Mathematics provides comprehensive, mathematically sound coverage of topics essential to the basic college math course. The Eighth Edition features chapter-opening Prep Tests, real-world applications, and a fresh design—all of which engage students and help them succeed in the course. The Aufmann Interactive Method (AIM) is incorporated throughout the text, ensuring that students interact with and master concepts as they are presented. Important Notice: Media content referenced within the product description or the product text may not be available in the ebook version.

The market size is 500,000 units. 25–45% of sales are custom.

The First Canadian Edition of BASIC COLLEGE MATHEMATICS engages students through real-world, Canadian examples and problems, while maintaining and building on the pedagogical strengths of the Aufmann series. Practice is a key to success in developmental mathematics and each feature within this title focuses on student mastery of concepts. All lessons, exercise sets, problems, and supplements are organized around a carefully constructed hierarchy of objectives; each exercise mirrors a preceding objective, which helps to reinforce key concepts and promote skill building. In addition to Canadian and international word problems and examples, this edition makes math skills more relevant to Canadian students through a chapter on the metric system and supports the unique blend of the metric system and Imperial System used in Canada.

Get Better Results with high quality content, exercise sets, and step-by-step pedagogy! The Miller/O'Neill/Hyde author team continues to offer an enlightened approach grounded in the fundamentals of classroom experience in Basic College Mathematics. The text reflects the compassion and insight of its experienced author team with features developed to address the specific needs of developmental level students. Throughout the text, the authors communicate to students the very points their instructors are likely to make during lecture, and this helps to reinforce the concepts and provide instruction that leads students to mastery and success. Also included are Problem Recognition Exercises, designed to help students recognize which solution strategies are most appropriate for a given exercise. These types of exercises, along with the number of practice problems and group activities available, permit instructors to choose from a wealth of problems, allowing ample opportunity for students to practice what they learn in lecture to hone their skills. In this way, the book perfectly complements any learning platform, whether traditional lecture or distance-learning; its instruction is so reflective of what comes from lecture, that students will feel as comfortable outside of class as they do inside class with their instructor.
