In the context of urbanization and compact urban living, conventional experience-based planning and design often cannot adequately address the serious environmental issues, such as thermal comfort and air quality. The ultimate goal of this book is to facilitate a paradigm shift from the conventional experience-based ways to a more scientific, evidence-based process of decision making in both urban planning and architectural design stage. This book introduces novel yet practical modelling and mapping methods, and provides scientific understandings of the urban typologies and wind environment from the urban to building scale through real examples and case studies. The tools provided in this book aid a systematic implementation of environmental information from urban planning to building design by making wind information more accessible to both urban planners and architects, and significantly increasing the impact of urban climate information on the practical urban planning and design. This book is a useful reference book to architectural postgraduates, design practitioners and planners, urban climate researchers, as well as policy makers for developing future livable and sustainable cities.

With the help of this compact guide, anyone suffering from CRPS (Complex Regional Pain Syndrome) (also known as RSD - Reflex Sympathetic Dystrophy) will better understand their condition and cope with the reality of living with it. Prof Karen Rodham draws on a wealth of clinical experience to give tried-and-tested practical advice for managing this very complex and debilitating syndrome, about which very little is understood by the medical community at large. Ten first-hand patient accounts of living with CRPS illustrate just how wide-ranging the impact can be physically, socially and emotionally, and what has helped on an individual basis. This book's hands-on guidance will be of great help to people diagnosed with CRPS and show family and friends how they can best provide support. It is also an essential resource for health psychologists working with CRPS patients.

Rapid technological, economic, social and cultural changes are transforming the idea of "Asian space." With the shift to a global economy and an urban population explosion, Asian cities have become a mainstay of progress, national pride, identity, and positioning on the global stage. The extraordinary pace and intensity of the changes have created a situation unique in the history of urban development. Despite the immense diversity of Asian countries, "Asia-ness" is often treated as a distinctive quality that has emerged from unique recent circumstances affecting Asian urbanizations as a whole. In Future Asian Space, 15 authors explore broad concepts relating to the creation and re-creation of "Asian space" and contemporary Asian identity, and their examination of different sites and research approaches highlights the difficulty of pinpointing what Asia-ness is, or might become. Appropriate design and planning of cities is a critical element in building a sustainable future and coping with environmental, social and cultural problems. Future Asian Space is designed to stimulate interests and engagement in discussions of the Asian city, and its trajectories in architecture and urbanism, but the authors' conclusions will intrigue anyone interested in the future of cities and urban life in Asia.
