Reasons Against Dropping the Atomic Bomb – Argument #5: Use of the bomb was more to scare Russia than to defeat Japan. As discussed above, bomb opponents question why the United States used atomic bombs on August 6 and 9, when they knew the Russians were going to declare war on Japan a week later, and when Operation Torch wasn't scheduled for months.

Nuclear weapons.

“A welcome antidote to the strange confluence of Nuclear Non-Proliferation Treaty (NPT) opponents” by one of America’s best known weapons experts (Christopher F. Chyba, *Science*). With clarity and expertise, Joseph Cirincione presents an even-handed look at the history of nuclear proliferation and an optimistic vision of its future, providing a comprehensive survey of the wide range of critical perspectives. Cirincione begins with the first atomic discoveries of the 1930s and covers the history of their growth all the way to current crisis with Iran. He unravels the science, strategy, and politics that have fueled the development of nuclear stockpiles and increased the chance of a nuclear terrorist attack. He also explains why many nations choose not to pursue nuclear weapons and pulls from this the outlines of a solution to the world’s proliferation problem: a balance of force and diplomacy, enforcement and engagement that yields a steady decrease in these deadly arsenals. Though nuclear weapons have not been used in war since August 1945, there is no guarantee this good fortune will continue. A unique blend of history, theory, and security analysis, *Bomb Scare* is an engaging text that not only supplies the general reader and student with a clear understanding of this issue but also provides a set of tools policymakers and scholars can use to prevent the cataclysmic consequences of another nuclear attack. “Invaluable . . . [*Bomb Scare*] ought to be read by everyone as a matter of life and death.”—*New York Review of Books*

There is a high risk that someone will use, by accident or design, one or more of the 17,000 nuclear weapons in the world today. Many thought such threats ended with the Cold War or that current policies can prevent or contain nuclear disaster. They are dead wrong—these weapons, possessed by states large and small, stable and unstable, remain an ongoing nightmare. Joseph Cirincione surveys the best thinking and worst fears of experts specializing in nuclear warfare and assesses the efforts to reduce or eliminate these nuclear dangers. His book offers hope: in the 1960s, twenty-three states had nuclear weapons and research programs; today, only nine states have weapons. More countries have abandoned nuclear weapon programs than have developed them, and global arsenals are just one-quarter of what they were during the Cold War. Yet can these trends continue, or are we on the brink of a new arms race—or worse, nuclear war? A former member of Senator Obama’s nuclear policy team, Cirincione helped shape the policies unveiled in Prague in 2009, and, as president of an organization intent on reducing nuclear threats, he operates at the center of debates on nuclear terrorism, new nuclear nations, and the risks of existing arsenals.

This book looks at the history of bomb scares and actual bombings and involves reader in actions they can take to go about their lives in a safer manner. The information is educational as well as preventive.

A global history of U.S. nuclear espionage traces the growth of nuclear activities in an increasing number of nations while indicating what the United States historically believed about each country’s laboratories, test sites, and decision-making councils, in an account that includes coverage of the mysterious Vela incident and current efforts to uncover nuclear secrets in Iran and North Korea. nuclear war—and Presidents' actions in nuclear crises—from Truman to Trump. Fred Kaplan, hailed by The New York Times as “a rare combination of defense intellectual and pugnacious reporter,” takes us into the White House Situation Room, the Joint Chiefs of Staff’s “Tank” in the Pentagon, and the vast chambers of Strategic Command to bring us the untold stories—based on exclusive interviews and previously classified documents—of how America’s presidents and generals have thought about, threatened, broached, and just barely avoided nuclear war from the dawn of the atomic age until today. Kaplan’s historical research and deep reporting will stand as the permanent record of politics. Discussing theories that have dominated nightmare scenarios from Hiroshima and Nagasaki, Kaplan presents the unthinkable in terms of mass destruction and demonstrates how the nuclear war reality will not go away, regardless of the dire consequences.

With startling revelations, Tsuyoshi Hasegawa rewrites the standard history of the end of World War II in the Pacific. By fully integrating the three key actors in the story--the United States, the Soviet Union, and Japan--Hasegawa for the first time puts the last months of the war into international perspective. From April 1945, when Stalin broke the Soviet-Japanese Neutrality Pact and Harry Truman assumed the presidency, to the final Soviet military actions against Japan, Hasegawa brings to light the real reasons Japan surrendered. From Washington to Moscow to Tokyo and back again, he shows us a high-stakes diplomatic game as Truman and Stalin sought to outmaneuver each other in forcing Japan's surrender; as Stalin dangled mediation offers to Japan while secretly preparing to fight in the Pacific; as Tokyo peace advocates desperately tried to stave off a war party determined to mount a last-ditch defense; and as the Americans struggled to balance their competing interests of ending the war with Japan and preventing the Soviets from expanding into the Pacific. Authoritative and engrossing, *Racing the Enemy* puts the final days of World War II into a whole new light.
