theory for beginning graduate students covers laws of large numbers, central limit theorems, random walks, martingales, Markov chains, ergodic theorems, and Brownian motion. It is a comprehensive treatment concentrating on the results that are the most useful for applications. Its philosophy is that the best way to learn probability is to see it in action, so there are 200 examples and 450 problems. The fourth edition begins with a short chapter on measure theory to orient readers new to the subject.

This is a comprehensive review of commutative

algebra, from localization and primary decomposition through dimension theory, homological methods, free resolutions and duality, emphasizing the origins of the ideas and their connections with other parts of mathematics. The book gives a concise treatment of Grobner basis theory and the constructive methods in commutative algebra and algebraic geometry that flow from it. Many exercises included.

This monograph is an exposition of the theory of central simple algebras with involution, in relation to linear algebraic groups. It

provides the algebra-theoretic foundations for much of the recent work on linear algebraic groups over arbitrary fields. Involutions are viewed as twisted forms of (hermitian) quadrics, leading to new developments on the model of the algebraic theory of quadratic forms. In addition to classical groups, phenomena related to triality are also discussed, as well as groups of type F_4 or G_2 arising from exceptional Jordan or composition algebras. Several results and notions appear here for the first time, notably the discriminant algebra of an algebra with unitary involution

Corrige Ebook Kindle

and the algebra-theoretic counterpart to linear groups of type D_4 . This volume also contains a Bibliography and Index. Features: original material not in print elsewhere a comprehensive discussion of algebra-theoretic and group-theoretic aspects extensive notes that give historical perspective and a survey on the literature rational methods that allow possible generalization to more general base rings

Cette collection privilégie la résolution de problèmes, prend régulièrement appui sur des situations concrètes, et aide à tisser des

liens entre les notions des différents domaines abordés par le programme. Entraîner les élèves à chercher, expérimenter, modéliser en particulier à l'aide des TICE, à raisonner et démontrer et à mettre en oeuvre des algorithmes sont des objectifs majeurs de ce manuel. Assurer une transition entre la classe de seconde et les exigences du cycle terminal et proposer des contenus et des méthodes permettant un travail personnel de l'élève sont deux axes fondamentaux de ce manuel.
