Also know as Click Click Bang, this game can be played at parties to annoy people who can't figure it out. The Host of the game will start "shooting" people by saying "bang! bang! bang!" or such and pointing (with your hand in the shape of a gun) randomly at people playing. People will then guess who died.

"Click." It booted up quickly, requesting a password. He wanted to curse, but instead turned away and re-examined the room. He saw the closet slightly ajar and approached. The door didn't creak. Inside was filled with clothes on the hangers, and below was a plastic bin. He opened it to see it filled to the brim with more of the homemade devices, some more intricate than others. He couldn't ...

Submarines were responsible for about 55 percent of the tonnage of the Japanese fleets sunk during World War II. The 22 percent casualty rate of U.S. submariners was the highest of the military services. This volume traces the career of the submarine the USS Puffer from the laying of her keel and her commissioning on April 27, 1943, until her departure for the scrap yard in late 1960. Compiled from interviews with former crew members, including the author's father, Donald B. McDonald, as well as other contemporary sources, it follows the crew of the Puffer through nine war patrols. Events recollected include the First War Patrol, which resulted in a record-setting 38 hour submergence because of enemy fire; the dangerous transfer of torpedoes while surfaced in enemy waters; and the wild bombardment of Japanese shore installations with the 5-inch deck gun. There are numerous wartime photographs and appendices providing a list of awards earned by the crew and a summary of claimed successful attacks. Brief biographies of the seven commissioned officers are also included.

Henry J. Mann is a writer and expatriate living in Cambodia. His life is unraveling. His wife has kicked him out and he is living in a small room at an old hotel. Money is tight and the future seems uncertain. He keeps getting odd phone calls, first an RCAF Captain who needs his help, and then from a General who is looking for his daughter's foreign lover. Could this be the same General's daughter, and the reason for his present predicament? Fearing the worst, he goes with the Frenchman to Laos to find a mystical opium den that he knows doesn't exist. Is it pretense to get him back to Thailand to solve a riddle from his past? A motorcycle accident, the death of an old girlfriend, and three months wandering before arriving in Cambodia. Henry travels back through time, his own past, and to a past life that he wished he had lived when Asia was truly exotic. The future is waiting. Will his wife stay at their house near the airport, or will she be out hunting wild boar, or the mythical white elephant of her childhood? The story unfolds in modern day Cambodia nearly thirty years after the genocide, Phnom Penh, a freewheeling city where the old and new collide, and a motley collection of castoffs, bums, and madmen call home.

For the better part of a century, attempts to explain what was really going on in the quantum world seemed doomed to failure. But recent technological advances have made the question both practical and urgent. A brilliantly imaginative group of physicists at Oxford University have risen to the challenge. This is their story. At long last, there is a sensible way to think about quantum mechanics. The new view abolishes the need to believe in randomness, long-range spooky forces, or conscious observers with mysterious powers to

collapse cats into a state of life or death. But the new understanding comes at a price: we must accept that we live in a multiverse wherein countless versions of reality unfold side-by-side. The philosophical and personal consequences of this are awe-inspiring. The new interpretation has allowed imaginative physicists to conceive of wonderful new technologies: measuring devices that effectively share information between worlds and computers that can borrow the power of other worlds to perform calculations. Step by step, the problems initially associated with the original many-worlds formulation have been addressed and answered so that a clear but startling new picture has emerged. Just as Copenhagen was the centre of quantum discussion a lifetime ago, so Oxford has been the epicenter of the modern debate, with such figures as Roger Penrose and Anton Zeilinger fighting for single-world views, and David Deutsch, Lev Vaidman and a host of others for many-worlds. An independent physicist living in Oxford, Bruce has had a ringside seat to the debate. In his capable hands, we understand why the initially fantastic sounding many-worlds view is not only a useful way to look at things, but logically compelling. Parallel worlds are as real as the distant galaxies detected by the Hubble Space Telescope, even though the evidence for their existence may consist only of a few photons.

How did social, cultural and political events in Britain during the 1990s shape contemporary British Fiction? From the fall of the Berlin Wall to the turn of the millennium, the 1990s witnessed a realignment of global politics. Against the changing international scene, this volume uses events abroad and in Britain to examine and explain the changes taking place in British fiction, including: the celebration of national identities, fuelled by the move toward political devolution in Northern Ireland, Scotland and Wales; the literary optimism in urban ethnic fictions written by a new generation of authors, born and raised in Britain; the popularity of neo-Victorian fiction. Critical surveys are balanced by in-depth readings of work by the authors who defined the decade, including A.S. Byatt, Hanif Kureishi, Will Self, Caryl Phillips and Irvine Welsh: an approach that illustrates exactly how their key themes and concerns fit within the social and political circumstances of the decade.

Would you like to be able to get 3 dates a day for the rest of your life? It's completely possible and it's something that I have done many times. The crazy thing is you wouldn't be getting dates with bad looking women or even average looking women, these 3 dates a day would be with the most attractive women on the internet. This is something I have been able to do and in this book I will teach you, step by step, how you can do this too. The world is entering the age of the internet and with it, the dating game has changed. Every girl with a smart phone is trying online dating, this means that the options are limitless. This book is for the people that want to take advantage of this change and achieve online dating success they never realized was even possible.

Other than having three points on my driving licence many years ago, I had never committed a crime or been on the wrong side of the law. As far as computers were concerned, I was pretty much a late learner - being well into my forties when I bought my first desktop computer. I was truly amazed at the internet and what could be learnt - opening up a world of information. I had become a member of the net-surfing fraternity. As time went by, I learnt more about computer skills and, along with many of my friends; I was soon downloading extra software, programs and classic movies onto my computer. All was going brilliantly until Tuesday 4th September 2012 when, with just two clicks of the mouse, my life changed dramatically.
