According to the ISM, CPSM is the credential that surpasses the demands of the international marketplace with multi-faceted skills in areas such as finance, supplier relationship management, organizational global strategy and risk compliance. The CPSM qualification enables professionals to gain a clear understanding of their organization's supply operation and enable managers to take an active role in critical decisions. It is slightly different from APICS's CSCP in that it is targeting those who wish to have a broad understanding of all components of the profession. It focuses primarily on strategic supply management, less on fundamental or tactical level knowledge. CSCP places heavier focus on integrated supply chain, while CPSM does not. To succeed in the CPSM exams, you need to get yourself truly familiar with the most important information by going through sufficiently focused revision. This is where we fill the gap - you may think of our product as the unofficial supplement to the regular training class, or you may view it as a standalone module with a focus on building up your exam readiness. There are three exams. Exam 1 covers the Foundation of Supply Management. Exam 2 covers Supply Management Performance. Exam 3 deals with Leadership. This book covers ALL these exams.

Toward Next-Generation Performance Budgeting: Lessons from the Experiences of Seven Reforming Countries analyzes the difficulties that national governments have had in linking measurement of performance and results to the annual budget process. The book is based on intensive reviews of four advanced countries that were early reformers and three pioneers in Central and Eastern Europe. In addition to looking at their current systems, Toward Next-Generation Performance Budgeting looks at how their approaches have evolved over time. This book attempts to fill a gap between survey-based self-assessments and best-practice guides. It was compiled in response to the concerns of budget departments in countries in Eastern Europe and Central Asia, many of which are committed to adopting some form of performance-based budgeting and are seeking to learn from the experiences of previous reformers what the practical challenges are and how they can adapt best-practice approaches to a messy reality. The case studies demonstrate a general pattern of disappointment with the results of performance budgeting, balanced by a strong belief in the underlying logic, which has resulted in repeated efforts to modify approaches to tighten the links between budgeting and performance. These efforts have resulted in significant variation in how countries have implemented performance budgeting and in the benefits they have derived. These variations offer guidance for models of next-generation performance budgeting, avoiding classic pitfalls, and incorporating modifications introduced by those who have used it longest and found it useful.
