"Around the world every year many thousands of students have to complete dissertations or theses as part of their undergraduate or masters studies in tourism and related subjects. Often the dissertation or thesis represents the culmination of their programme as a substantial piece of self-directed work. More than just a means to consolidate their final grade, it is also an exciting chance to conduct intensive research on a topic of their choosing. It can also be a gateway to further periods of study as well as job offers and future career paths. Yet for all these reasons, the dissertation is viewed by many students as a tricky challenge. This book intends to take the stress and anxiety out of doing a dissertation in tourism studies and related disciplines. The dissertation process is examined from the germination of an idea to the submission, presentation and assessment of the final document. We offer a framework

for conducting dissertations in the English-speaking world which students can adopt to varying degrees in their research at the undergraduate and masters levels. We aim to debunk the popular myths and common pitfalls of doing a dissertation. Rather than view the dissertation as a single, overwhelming project, the dissertation is presented as a series of more modest, manageable yet crucially inter-linked tasks that all students can successfully complete through effective time management"--

Delphi Component Design tells the inside story of how and why Delphi was built, and how to make use of this information to build better Delphi components and applications. Whether you're a Delphi application writer yearning to expand into component writing, or an experienced Delphi component writer in pursuit of the smaller, faster, better Holy Grail, Delphi Component Design will help you sort out what Delphi Visual Component Library (VCL) services can do for you (and how they do it); what your components can do for VCL; what standard behaviors your component classes must implement; and how to take advantage of little-known VCL classes and services to dramatically improve your component's ease of use, code reuse, flexibility, and performance. This is the no-stone-unturned authority on building advanced Delphi components - from high-level views of how a component fits into the grand scheme of things to the minute details of how each link between a component and the rest of the system works; from design-time support tools to run-time performance optimizations.

This advanced-level reference shows developers what they need to know most about Delphi 4. Topics covered include embedded links, special features and DLLs, including creating a Visual Component Library, advanced OOP and object Pascal.

"This research publication accommodates in-depth studies that elucidate both the prospects and problems of learning assessment in higher education"--Provided by publisher.

Welcome to Postcards, now in its second edition, the popular American English program for teenagers.
