Small and medium enterprise (SME) support programs are a common feature of industrial policy in developing countries, but one whose effectiveness is not well known. Governments are motivated to support SMEs both because they make up the majority of industrial enterprises and contribute substantially to GDP, employment and earnings, and because SMEs are thought to be weaker than their larger counterparts. Few governments, however, have evaluated their SME programs rigorously so there is little empirical basis for rational allocation of resources to the well performing programs. The paucity of empirical evidence from rigorous impact evaluations also presents problems for multi-lateral and bilateral donors in deciding whether or not to provide lending or aid for such policy interventions to promote SME development. This study rigorously evaluate SME programs in four Latin American countries to gain insights into which programs perform better than others, and just as important, why. These countries □ Mexico, Chile, Colombia and Peru □ cover a wide range of enterprise support programs, including training, innovation and technology upgrading, quality control, market development, export promotion and network formation. Broadly comparable panel data on enterprises is used to investigate the net impacts of these SME interventions.

Examining peacebuilding through the intersection of security, development and democracy, Castaneda explores how the European Union has employed civilian tools for supporting peacebuilding in conflict-affected countries by working at the same time with CSOs and government institutions.

The Latin American Neutrosophic Science Association was created in 2018 as a result of the initiative of a group of university professors from Mexico and Ecuador. The Association has developed an intense work in the investigative context, expression of the capacity that neutrosophy has as a tool for understanding and transformation of reality in social benefit. Neutrosophic sets as a generalization fuzzy set (especially intuitionistic fuzzy sets), allows handling a greater number of situations that occur in reality and becomes a facilitator of the approach to the studied object without undermining its complex and multivariate essence. In this special edition, researchers from six Ecuadorian universities show the results of research projects addressing a wide range of topics related to the social environment of these Higher Education Institutions. The contents include law, criminology, public and administrative management, evaluation of pedagogical scenarios, prospective analysis, artificial intelligence, among other topics. They are many different texts with a common denominator, the social sciences, and their relationship with neutrosophy. The progress of these investigations originates a significant change in the ways of validating and reasoning the proposals, the appreciation of neutrality increases the interpretability and the inferential efficacy from the analysis of the results, which enunciates a methodological, perceptive and objective enrichment in the humanistic sciences in Latin American geographical region.

“Neutrosophic Sets and Systems” has been created for publications on advanced studies in neutrosophy, neutrosophic set, neutrosophic logic, neutrosophic probability, neutrosophic statistics that started in 1995 and their applications in any field, such as the neutrosophic structures developed in algebra, geometry, topology, etc.

Is the objective that the European Union set itself in 2000, that is, to be «the most competitive knowledge-based society and economy» by 2010 still realistic? The momentous year has arrived, but it is discouraging to note that very few steps have been made in the direction that was fixed. What has gone wrong? Were the philosophical, epistemological and economic conditions adequate to achieve the desired result? This book – the result of a research project commissioned by the European Commission – critically investigates the society of knowledge and the way in which the European Union has proceeded towards it, examining first of all the premises and the contributions that the disciplines of Science and Technological Studies can provide. In this way, we have proposed innovative theoretical and epistemological bases for a multidisciplinary approach – making use of the Modelling Approach to Science – and therefore insisting on the function that human sciences can have for a society of knowledge that hinges not so much on an industrialist scenario, but a humanist one that eschews hyper-specialization and instead privileges creativity, flexibility, imagination and innovation economy.

Youth at Risk in Latin America provides evidence-based guidance to policymakers that will help increase the effectiveness of their youth investment program. Drawing on the authors' detailed analyses, the book describes twenty-three policies and programs that youth development experts agree are the basis of a quality youth development portfolio, from early childhood development programs to parent training to cash transfers for positive behaviors. It also lays out strategies for implementing this effective youth portfolio in a budget-constrained environment by reallocation of resources away from.
