to live helped him survive eight different labor and concentration camps in the Holocaust, start a new life in America, and keep a family intact in the aftermath of his wife's suicide - one of the Nazis' last victims.

Using case law from multiple jurisdictions, Stephen Mason examines the nature and legal bearing of electronic signatures.

This report assesses opportunities, risks, and challenges attendant to future development and deployment of UAS within the National Airspace System (NAS) affecting UAS forecast growth from 2015 to 2035. Analysis of four key areas is performed: technology, mission needs, economics, and existing or anticipated challenges to routine use in NAS operations. Forecast effects of emerging technologies as well as anticipating new technological innovations in areas of airframes, powerplants, sensors, communication, command and control systems, and information technology and processing are evaluated. Anticipated mission needs include intelligence, surveillance and reconnaissance (ISR), as well as new areas such as stores delivery, cargo transport, search and rescue, and pilot augmentation; example business case models are developed for each of these areas. Challenges to routine UAS usage in the NAS include: absence of legislation and regulations for safe flight in integrated airspace; pilot training and certification; regulatory, policy, and procedural issues; social issues, such as privacy and nuisance concerns; environmental issues, such as noise and emissions; and safety.

The contributors to this book emphasize a mix of heritage and history as the primary leitmotif for contemporary border rivalries and dynamics. Whether the region's 11 states want it or not, their bordered identity is falling into ever sharper definition-if only because of pressure from extraregional states. Chapters are organized by country to elicit a broad range of thought and approach as much as for the specific areas or nation-states examined in each chapter. This book aims to provide new ways of looking at the reality and illusion of bordered Southeast Asia. Edited by James Clad, Sean M. McDonald, and Bruce Vaughn, with contributions from: Zachary Abuza, Richard P. Cronin, David Lee, Rhoda Margesson, Dick K. Nanto, Patricia O'Brien, David Rosenberg, Carlyle A. Thayer, Michael Wood.

This astronomy travel guide examines the many wonderful opportunities for experiencing the observing hobby. Amateur astronomy is often consigned to observing from home or from a local park, yet it can be much more. Tim Treadwell explores all the possibilities of astronomical and space-related activities that are available on day trips and longer vacations. These activities range from observatory visits and other simple ways to build an astronomy event into a holiday, to full blown specialized astronomy travel. Many trips give the opportunity to visit some of the world's famous attractions. On most vacations it can be a matter of just taking a day (or night) out of your schedule to fit in an astronomy event, but larger, dedicated pilgrimages are also possible. How to make the most of astronomy potential on a holiday, whether observing on the beach in Hawaii with the Telescope Guy or visiting Star City in Russia, is covered in detail. Go to a star party, explore the national parks or see the northern lights! There are a wide variety of activities for all budgets described in this book.

This comprehensive handbook provides an overview of space technology and a holistic understanding of the system-of-systems that is a modern spacecraft. With a foreword by Elon Musk, CEO and CTO of SpaceX, and contributions from globally leading agency experts from NASA, ESA, JAXA, and CNES, as well as European and North American academics and industrialists, this handbook, as well as giving an interdisciplinary overview, offers, through individual self-contained chapters, more detailed understanding of specific fields, ranging through: - Launch systems, structures, power, thermal, communications, propulsion, and software, to - entry, descent and landing, ground segment, robotics, and data systems, to - technology management, legal and regulatory issues, and project

management. This handbook is an equally invaluable asset to those on a career path towards the space industry as it is to those already within the industry.

The 1859 exploration of the Great Basin by army topographical engineer James Simpson opened up one of the West's most important transportation and communication corridors, a vital link between the Pacific Coast and the rest of the nation. It became the route of the Pony Express and the Overland Mail and Stage, the line of the Pacific telegraph, a major wagon road for freighters and emigrants, and, later, the first transcontinental auto road, the Lincoln Highway, now Highway 50. No one has accurately tracked or mapped Simpson's original route, until now. Jesse Petersen shows in words, maps, and photos exactly where the explorer went. Sharing his detective-like reasoning as he walked or drove the entire trail west and Simpson's variant route returning east, Petersen takes readers on a mountain and desert trek through some of America's most remote and striking landscapes.
