The oldest members of the Baby-Boomer generation are now crossing the threshold of eligibility for Social Security and Medicare with extensive and significant implications for these programs' overall spending and fiscal sustainability. Yet the aging of the Baby Boomers is just one part of the rapidly changing landscape of aging in the United States and around the world. The latest volume in the NBER's Economics of Aging series, Discoveries in the Economics of Aging assembles incisive analyses of the most recent research in this expanding field of study. A substantive focus of the volume is the well-documented relationship between health and financial well-being, especially as

people age. The contributors explore this issue from a variety of perspectives within the context of the changing demographic landscape. The first part of the volume explores recent trends in health measurement, including the use of alternative measurement indices. Later contributions explore, among other topics, alternate determinants of health, including retirement, marital status, and cohabitation with family, and the potential for innovations, interventions, and public policy to improve health and financial well-being.

Treating the Lifetime Health Effects of Childhood Victimization:- reports on the latest research in both child maltreatment and health psychology/behavioral medicine and

The Epigenome and Developmental Origins of Health and Disease synthesizes the existing knowledge on how the in utero environment could be the most important environment in shaping later risk for various diseases or to conversely promote the health of the offspring. The book mines the existing literature from a variety of disciplines from toxicology to nutrition to epigenetics to reveal how contrasting maternal in utero environmental changes might be leading to epigenetic convergence and the resulting deleterious phenotypic

and physiological effects in our offspring. It is increasingly becoming apparent that even subtle changes in the mother's diet, stress, and exposure to low concentrations of toxic chemicals at levels deemed safe by the EPA and FDA, such as endocrine disrupting compounds (EDC), can dramatically impact the health of our children, possibly leading to metabolic, cardiovascular, immunological, neurobehavioral disorders, and increased risk for cancer to list but a few examples. Informs how everyday choices pregnant women make can impact child development Ties together how in utero environmental changes may be inducing epigenetic changes in the offspring leading to overlapping phenotypes regardless of the initial insult (toxic, nutrition, or stress) Includes a boxed-in area in

Distributional cost-effectiveness analysis aims to help health care and public health organisations make fairer decisions with better outcomes. Whereas standard cost-effectiveness analysis provides information about total costs and effects, distributional cost-effectiveness analysis provides additional information about fairness in the distribution of costs and effects - who gains, who loses, and by how much. It can also provide information about the trade-offs that sometimes occur between efficiency objectives, such as improving total health, and

equity objectives, such as reducing unfair inequality in health. This is a practical guide to a flexible suite of economic methods for quantifying the equity consequences of health programmes in high-, middle- and low-income countries. The methods can be tailored and combined in various ways to provide useful information to different decision-makers in different countries with different distributional equity concerns. The handbook is primarily aimed at postgraduate students and analysts specialising in cost-effectiveness analysis but is also accessible to a broader audience of health sector academics, practitioners, managers, policymakers and stakeholders. As well as offering an overview for research commissioners, users, and producers, the book includes systematic technical guidance
