reference book for many different courses worldwide.

This book examines why workplaces around the world have become involved in childcare and the nature of the programs that have been implemented. It provides an overview of diverse workplace initiatives beyond traditional preschool care. Partnership is a key theme, and the authors highlight the fruitfulness of collaborations that combine the resources and capabilities of different actors. Ten industrialized and developing countries are examined through a national overview on policies and facilities for childcare and the implications for working parents, followed by case studies of specific workplaces. The studies provide

considerable detail on why the childcare support was started, how it is funded and managed, how various partners are involved, and the perspectives of workers and employers on the support provided. The book shows how support for childcare has been organized and funded in a variety of workplaces and the diversity of the partnerships that have evolved in both developing and industrialized countries. It will be a useful resource for policymakers and workplace partners looking for practical ways to help working parents with their childcare needs.

The creation of new lexical units and patterns has been studied in different research frameworks, focusing on either system-internal or system-external aspects, from which no comprehensive view has emerged. The volume aims to fill this gap by studying dynamic

processes in the lexicon – understood in a wide sense as not being necessarily limited to the word level – by bringing together approaches directed to morphological productivity as well as approaches analyzing general types of lexical innovation and the role of discourse-related factors. The papers deal with ongoing changes as well as with historical processes of change in different languages and reflect on patterns and specific subtypes of lexical innovation as well as on their external conditions and the speakers' motivations for innovating. Moreover, the diffusion and conventionalization of innovations will be addressed. In this way, the volume contributes to understanding the complex interplay of structural, cognitive and functional factors in the lexicon as a highly dynamic domain.

Acupuncture therapy has been practiced in China and other Asian countries for more than two thousand years. Modern clinical research has confirmed the impressive therapeutic effect of acupuncture on numerous human ailments, such as controlling pain, nausea, and vomiting. However, the biological mechanisms of acupuncture are still under debate. In Traditional Chinese Medicine (TCM), the mechanism of acupuncture therapy is explained by a meridian model. According to this model, acupuncture is believed to treat the diseased organs by modulating two conditions known as Yin and Yang, which represent all the opposite principles that people find in the universe, both inside and outside the human body. Yin and Yang complement each other, and are subjected to changes between each other. The balance of Yin and Yang is thought to be maintained by Qi, an energy substance flowing constantly through

the meridian, a network connecting all the organs of the body. The illness, according to this theory, is the temporary dominance of one principle over the other, owing to the blockade of the Qi from flowing through the meridian under certain circumstance. The axiom of "No stagnation, No pain" in TCM summarizes this concept. Thus, the goal of acupuncture treatment is to restore the balance of Yin and Yang conditions in the diseased organ(s). This theory has been considered to be useful to guide this ancient therapy, such as carrying out diagnosis, deciding on the principle, and selecting the acupoints.
