A behind-the-scenes portrait of the first president reveals his formidable persuasive talents, careful display of a virtuous public image and leadership capabilities of particular compatibility with a young America. Reprint.

Dr Jacob Bronowski's *The Ascent of Man* traces the development of human society through our understanding of science. First published in 1973 to accompany the groundbreaking BBC television series, it is considered one of the first works of 'popular science', illuminating the historical and social context of scientific development for a generation of readers. In his highly accessible style, Dr Bronowski discusses human invention from the flint tool to geometry, agriculture to genetics, and from alchemy to the theory of relativity, showing how they all are expressions of our ability to understand and control nature. In this new paperback edition, *The Ascent of Man* inspires, influences and informs as profoundly as ever.

An account of the history and philosophy of science drawn from the BBC television series created by Dr. Bronowski

Charles Eisenstein explores the history and potential future of civilization, tracing the converging crises of our age to the illusion of the separate self. In this limited hardcover edition of Eisenstein's landmark book, he argues that our disconnection from one another and the natural world has mislaid the foundations of science, religion, money, technology, economics, medicine, and education as we know them. It has fired our near-pathological pursuit of technological Utopias even as we push ourselves and our planet to the brink of collapse. Fortunately, an Age of Reunion is emerging out of the birth pangs of an earth in crisis. Our journey of separation hasn't been a terrible mistake but an evolutionary process and an adventure in self-discovery. Even in our darkest hour, Eisenstein sees the possibility of a more beautiful world--not through the extension of millennia-old methods of management and control but by fundamentally reimagining ourselves and our systems. We must shift away from our Babelian efforts to build ever-higher towers to heaven and instead turn out attention to creating a new kind of civilization--one designed for beauty rather than height. Breathtaking in its scope and intelligence, *The Ascent of Humanity* is a landmark book showing what it truly means to be human. "A tour-de-force filled with astounding insight, wit, wisdom and heart." --Christopher Uhl, author of *Developing Ecological Consciousness: Paths to a Sustainable Future* "Quite marvelous, a hugely important work. This book is truly needed in this time of deepening crisis." --John Zerzan, author of *Future Primitive and Elements of Refusal*

The 10th anniversary edition, with new chapters on the crash, Chimerica, and cryptocurrency In this updated edition, Niall Ferguson brings his classic financial history of the world up to the present day, tackling the populist backlash that followed the 2008 crisis, the descent of "Chimerica" into a trade war, and the advent of cryptocurrencies, such as Bitcoin, with his signature clarity and expert lens. *The Ascent of Money* reveals finance as the backbone of history, casting a new light on familiar events: the Renaissance enabled by Italian foreign exchange dealers, the French Revolution traced back to a stock market bubble, the 2008 crisis traced from America's bankruptcy capital, Memphis, to China's boomtown, Chongqing. We may resent the plutocrats of Wall Street but, as Ferguson argues, the evolution of finance has rivaled the importance of any technological innovation in the rise

of civilization. Indeed, to study the ascent and descent of money is to study the rise and fall of Western power itself.

The most famous skateboarder ever shares the business secrets to his success! He's the man who put skateboarding on the map. He's the first to land a 900 (two and a half full rotations). He's also among the richest pitchmen in any sport. And, in a sport that's especially youth-oriented, Tony Hawk, a 40-something father of four, still connects with his audience by staying true to who he is. Moving easily between the ramp and the boardroom, Tony currently runs one of the most acclaimed action sports companies, a clothing line, and video game series bearing his name that has sold over \$1 billion worldwide, making it the biggest selling action sports game franchise in game history. He has secured endorsement deals with major brands such as McDonalds, Intel, T-Mobile and Kohl's; started the Boom Boom HuckJam action sports tour; and achieved worldwide acclaim from the ESPN X Games. Filled with Tony's typical modesty and humor, *How Did I Get Here?* tells the amazing story behind Tony Hawk's unprecedented success from skateboarder to CEO, and the secrets behind his lasting appeal. You'll find out how authenticity has served him well in all his achievements. You'll also understand how his story has shaped many of his fundamental values, including his huge desire to win and his strong sense of realism. Get the inside story of Tony Hawk beyond the skateboard as he answers the question: *How Did I Get Here?*

When and where did the ancestors of modern birds evolve? What enabled them to survive the meteoric impact that wiped out the dinosaurs? How did these early birds spread across the globe and give rise to the 10,600-plus species we recognise today? From the largest ratites to the smallest hummingbirds? Based on the latest scientific discoveries and enriched by personal observations, *The Ascent of Birds* sets out to answer these fundamental questions. *The Ascent of Birds* is divided into self-contained chapters, or stories, that collectively encompass the evolution of modern birds from their origins in Gondwana, over 100 million years ago, to the present day. The stories are arranged in chronological order, from tinamous to tanagers, and describe the many dispersal and speciation events that underpin the world's 10,600-plus species. Although each chapter is spearheaded by a named bird and focuses on a specific evolutionary mechanism, the narrative will often explore the relevance of such events and processes to evolution in general. The book starts with *The Tinamou's Story*, which explains the presence of flightless birds in South America, Africa, and Australasia, and dispels the cherished role of continental drift as an explanation for their biogeography. It also introduces the concept of neoteny, an evolutionary trick that enabled dinosaurs to become birds and humans to conquer the planet. *The Vegavis's Story* explores the evidence for a Cretaceous origin of modern birds and why they were able to survive the asteroid collision that saw the demise not only of dinosaurs but of up to three-quarters of all species. *The Duck's Story* switches to sex: why have so few species retained the ancestral copulatory organ? Or, put another way, why do most birds exhibit the paradoxical phenomenon of penis loss, despite all species requiring internal fertilisation? *The Hoatzin's Story* reveals unexpected oceanic rafting from Africa to South America: a stranger-than-fiction means of dispersal that is now thought to account for the presence of other South American vertebrates, including geckos and monkeys. The latest theories underpinning speciation are also explored. *The Manakin's Story*, for example, reveals how South America's extraordinarily rich avifauna has been shaped by past geological, oceanographic and climatic changes, while *The Storm-Petrel's Story* examines how species can evolve from an ancestral population despite inhabiting the same geographical area. The thorny issue of what constitutes a species is discussed in *The Albatross's Story*, while *The Penguin's Story* explores the effects of environment on phenotype? in the case of the Emperor penguin, the harshest on the planet. Recent genomic advances have given scientists novel approaches to explore the distant past and have revealed many unexpected journeys, including the unique overland dispersal of an early suboscine from Asia to South America (*The Sapayoa's Story*) and the blackbird's ancestral sweepstakes dispersals across the Atlantic (*The Thrush's Story*). Additional vignettes update more familiar concepts that encourage speciation: sexual selection (*The Bird-of-Paradise's Story*); extended phenotypes (*The Bowerbird's Story*); hybridisation (*The Sparrow's Story*); and 'great speciators' (*The White-eye's Story*). Finally, the book explores the raft of recent publications that help explain the evolution of cognitive skills (*The Crow's Story*); plumage colouration (*The Starling's Story*); and birdsong (*The Finch's Story*)

This volume provides an overarching view of the early social and intellectual transformations that brought European civilization from its birth in antiquity to its rebirth during the Renaissance. --from publisher description

The author of *The Seven Storey Mountain* explores the mysticism of Saint John of the Cross. The only thing that can save the world from complete moral collapse is a spiritual revolution. . . . The desire for unworldliness, detachment, and union with God is the most fundamental expression of this revolutionary spirit. In *Ascent to Truth*, author and Trappist Monk Thomas Merton makes an impassioned case for the importance of contemplation. Drawing on a range of thinkers—from Carl Jung to Pope Pius XII—Merton defines the nature of contemplative experience and shows how the Christian mysticism of sixteenth-century Spanish Carmelite Saint John of the Cross offers essential answers to our disquieting and troubling times. “For any who have the desire to look into meditation and contemplation . . . this is the book for which they have waited.” —New York Herald Tribune Book Review
“For those who may be curious about mysticism, and for those who may be called to a life of contemplation, this is an excellent book.” —Catholic World

Presents a history of the word "asshole"--from its use by World War II servicemen to express frustration at arrogant superiors to its first use in print by Norman Mailer to George W. Bush's use of the word to describe a journalist.
