1974 by farmers who were digging a well. The second phase of an international research project began in 2011, and more recently, promising new excavations began in Pit 2, with exciting fresh discoveries already announced. The Terracotta Warriors seeks to examine one of China's most famous archaeological discoveries in light of these new findings. The book begins with the discovery of the terracotta warriors and then tells the history of the Qin Dynasty and as much as is known about the construction of the third century BCE mausoleum, based on the work of the historian Sima Qian (145–90 BCE). He wrote that the First Emperor was buried with palaces, towers, officials, valuable artifacts, and wondrous objects. The new findings and the historical description of the mausoleum suggest that the next discoveries may surpass the size and conception of the original discovery of the terracotta warriors. In the second part, Edward Burman questions who built the warriors, how, and what purpose they served. Finally, he anticipates the ongoing discoveries and describes the new methods of excavation and preservation.

The Terra Cotta Army is one of the greatest archaeological discoveries ever made. Over seven thousand life-size figures of warriors and horses were interred in the mausoleum of the first emperor of China—and each figure was individually carved. Weaving together history and a first-hand account of his experiences in China, John Man tells the fascinating story of how and why these astonishing figures were created in the third century BC, and how they have become a symbol of China's history, culture, and society.

many was that this remarkable army could reveal the secrets of China's first emperor, Qin Shi Huang, a man who united seven warring tribes into one of the most powerful nations on earth. Even as research continues 40 years after the initial find, some of the facts about the Terracotta Army are staggering. It's estimated that the army consists of 8,000 soldiers, 130 chariots, and hundreds of horses and cavalry, all of which were sculpted on a mass scale by various factories but were subsequently molded to feature their own unique appearances separate of one another. As if that wasn't enough, there are also terracotta sculptures of acrobats, servants, and musicians, and the sculptures were painted (though most of the paint has faded away over time). This impressive horde of funerary art was buried with Qin Shi Huang to serve him in the afterlife, much the same way Egyptian pyramids were constructed for pharaohs. While the sculptures comprising the Terracotta Army are impressive as a work of art, they have indeed proven to be an invaluable historical source as well. Thanks to collections of weapons buried with the sculptures, as well as the shapes and sizes of the various military equipment, historians can get a sense of what Qin Shi Huang had at his disposal when he fought battles, and the Terracotta Army itself is even organized based on military rank, allowing historians a chance to understand ancient Chinese military formations.
