Bisphenol A - Natalie R Gassman 2022-01-04
Bisphenol A (BPA) is a high production volume

endocrine-disrupting chemical present in numerous consumer products. Extensive use of

BPA has led to wide-spread contamination in the air, soil, and water, leading to ubiquitous human exposure. Research into BPA has grown exponentially over the past ten years, with numerous modes of action being identified that impact human health and disease development. While BPA has estrogenic effects, emerging literature has identified several non-receptor mediated modes of action, such as epigenetic reprogramming, that can affect the long-term health of the population. This book highlights the multiple modes of action BPA can use to reprogram cells genetically and metabolically. By compiling critical studies in BPA and outlining the connections and disparities in the literature to build a broader understanding of this complex endocrine-disrupting chemical and its impact on the environment and human health, this book is an ideal resource for postgraduates and researchers in a range of disciplines from toxicology to epigenetics and cancer epidemiology.

Estrogen Effects in Psychiatric Disorders - Niels Bergemann 2005-01-24

A number of studies, mostly focusing on estrogen replacement therapy in women, have reported beneficial actions of these hormones on various neurobiological and neuropathological parameters in health and disease. Recent research has focused on gender differences and there is increasing evidence that estrogens exert protective effects in schizophrenia. Hormonal fluctuations or lack of estrogen may increase the

risk of depression among vulnerable women. Treatment of depression with estrogen may stabilize and restore disrupted homeostasis – as during post-partum, premenstrual, or perimenopausal conditions – and act as a psychomodulator to offset vulnerability to dysphoric mood when estrogen levels are significantly decreased, as in the case of postmenopausal women. Studies on the effect of estrogens on Alzheimer’s Disease are still rather controversial, they do, however, facilitate the hypothesis that estrogens may have a modifying effect on the onset and course of AD, at least in subgroups of patients.

Contraception: Your Questions Answered - John Guillebaud 2017-06-16

From reviews of the previous edition: ‘Provides a wealth of information ... graphically illustrates the need for practitioners to be thoroughly knowledgeable.’ Toni Belfield, Director of Information, Family Planning Association. The world’s population is increasing dramatically. At levels over 7 billion, rising annually by over 83 million (with births outstripping deaths by a factor of c. 2.4) the toll this imbalance takes on the environment, developing economies and

resources (healthcare, education, rates of poverty) and the lives of women in the poorer parts of the world is increasingly unsustainable. Even in the developed world there is still an unacceptably high rate of unplanned pregnancies, demonstrating that appropriate education at both local and global levels about the full range of available contraception is essential. Using a highly accessible question-and-answer format, John Guillebaud and Anne MacGregor seek to ensure everything needed for good family planning practice is here in this book. The Menopause Answer Book allows women to carefully assess their own symptoms and then seek out the information and treatments that will be tailored to their own specific needs: -- Find out if you're at risk for diseases associated with menopause -- Develop your Menopause Action Plan -- Assess the pros and cons of Hormone Replacement Therapy -- Find out what tests to request from your doctor -- Find out how to get the attention and treatment that you need -- Learn about important lifestyle changes to make right now Women dealing with menopause and perimenopause are bombarded with information

The Female Brain - Louann Brizendine, M.D. 2007-08-07

Since Dr. Brizendine wrote *The Female Brain* ten years ago, the response has been overwhelming. This New York Times bestseller has been translated into more than thirty languages, has sold nearly a million copies between editions, and has most recently inspired a romantic comedy starring Whitney Cummings and Sofia Vergara. And its profound scientific understanding of the nature and experience of

the female brain continues to guide women as they pass through life stages, to help men better understand the girls and women in their lives, and to illuminate the delicate emotional machinery of a love relationship. Why are women more verbal than men? Why do women remember details of fights that men can't remember at all? Why do women tend to form deeper bonds with their female friends than men do with their male counterparts? These and other questions have stumped both sexes throughout the ages. Now, pioneering neuropsychiatrist Louann Brizendine, M.D., brings together the latest findings to show how the unique structure of the female brain determines how women think, what they value, how they communicate, and who they love. While doing research as a medical student at Yale and then as a resident and faculty member at Harvard, Louann Brizendine discovered that almost all of the clinical data in existence on neurology, psychology, and neurobiology

focused exclusively on males. In response to the overwhelming need for information on the female mind, Brizendine established the first clinic in the country to study and treat women's brain function. In *The Female Brain*, Dr. Brizendine distills all her findings and the latest information from the scientific community in a highly accessible book that educates women about their unique brain/body/behavior. The result: women will come away from this book knowing that they have a lean, mean, communicating machine. Men will develop a serious case of brain envy.

Estrogen Revisited: Lifelong & Fearless - Donna Walters and Blane Crandall, MD 2008

Menopause: Menopause must be endured -- an accepted notion, right? WRONG! Millions of women have chosen a menopause-free lifestyle, and Donna Walters, 62, is among that number. Unbelievably true, she has NEVER experienced menopause and lives a healthy, youthful and energetic life. Her womanhood is intact, and she remains active in the game of life. To benefit women worldwide and to create estrogen awareness, Ms. Walters dares to publicize two newsworthy realities never discussed or acknowledged: successful long-term estrogen use and never having menopause! Fact: The 2002 Woman's Health Initiative study, riddled with one-sided, fear-based results, caused a massive rejection of HRT. Yet, millions of women disregarded those results and now enjoy a menopause-free life due to estrogen use. Among that number, Ms. Walters, a successful 31-year estrogen user, debunks the estrogen controversy and virtually eliminates confusion and fear amid silent sufferers! Confirmation: Co-author Dr.

Blane Crandall, an OB/GYN surgeon, provides valuable information encompassing estrogen and its health benefits. His compelling views are shared to stop the ongoing disability; the taking of physical, mental, social, and emotional health; and the eventual premature death millions of women worldwide. Dr. Crandall states, "Most women can start HRT at any age, even in the eighties and nineties." Choice: Menopause can cause 22 negative, lifelong health issues! Women need to know many can be circumvented through estrogen use, and more importantly, the avoidance of menopause can be a choice. Estrogen Revisited fuels the fight for the right to choose! Improvement: Passionate about truth, Ms. Walters oversees an effort to improve women's lives beyond menopausal years. Sounding a clarion call, she announces, "The effects of menopause range from osteoporosis to breast cancer; heart disease to stroke, and they can be life altering.
