**My Teacher Changed My Life** - Lee Armstrong  
2021-04-15

It has been a very interesting life, both professional and personal. After going to six

different high schools (including summer school), I never graduated. My goal in life from an early age was to be an automotive engineer. In my senior year of high school with no chance of graduating, I abandoned that goal. One of my teachers, after hearing of my dreams falling apart, worked with me and got me into a fantastic engineering school without needing to complete high school. This was in 1962. Over the years, I completed my master's level in mechanical, electrical, and systems engineering and in computer science. Almost all of my career was in planning for and developing future technologies of many types. A few years ago, while at a resort in Sint Maarten, I met another couple and the man asked me what I did and turned out that both of us were engineers. He then asked what kind of work I did and with what companies, and when I replied, he practically shouted, "Oh my god, you are that Lee Armstrong! I researched and studied everything I could find

that you wrote and did." My first marriage was good at first, but then she started an affair with a man just getting out of prison for murdering his wife. I tried to get her to end it, including moving to a different state. She even said, "Why can't you just share me?" My second wife was incredible (she passed as this was being prepared for printing). After forty years of marriage, I still had a hard, passionate love for her; we were not just a couple. For a long time, my work took me all over the world. She started to come with me, and we would usually spend another week or two as vacation time. I was consulting, so I could work anywhere, even on that tropical beach. Between work and pleasure, for many years, we averaged six months a year away from home, averaged for about fifteen years, going to five different countries each year.

The American Psychiatric Association Practice Guidelines for the Psychiatric Evaluation of Adults, Third Edition -

American Psychiatric Association 2015-07-29  
Since the publication of the Institute of Medicine (IOM) report Clinical Practice Guidelines We Can Trust in 2011, there has been an increasing emphasis on assuring that clinical practice guidelines are trustworthy, developed in a transparent

fashion, and based on a systematic review of the available research evidence. To align with the IOM recommendations and to meet the new requirements for inclusion of a guideline in the National Guidelines Clearinghouse of the Agency for Healthcare Research and Quality (AHRQ), American Psychiatric Association (APA) has adopted a new process for practice guideline development. Under this new process APA's practice guidelines also seek to provide better clinical utility and usability. Rather than a broad overview of treatment for a disorder, new practice guidelines focus on a set of discrete clinical questions of relevance to an overarching subject area. A systematic review of evidence is conducted to address these clinical questions and involves a detailed assessment of individual studies. The quality of the overall body of evidence is also rated and is summarized in the practice guideline. With the new process,

recommendations are determined by weighing potential benefits and harms of an intervention in a specific clinical context. Clear, concise, and actionable recommendation statements help clinicians to incorporate recommendations into clinical practice, with the goal of improving quality of care. The new practice guideline format is also designed to be more user friendly by dividing information into modules on specific clinical questions. Each module has a consistent organization, which will assist users in finding clinically useful and relevant information quickly and easily. This new edition of the practice guidelines on psychiatric evaluation for adults is the first set of the APA's guidelines developed under the new guideline development process. These guidelines address the following nine topics, in the context of an initial psychiatric evaluation: review of psychiatric symptoms, trauma history, and treatment history; substance use assessment;

assessment of suicide risk; assessment for risk of aggressive behaviors; assessment of cultural factors; assessment of medical health; quantitative assessment; involvement of the patient in treatment decision making; and documentation of the psychiatric evaluation. Each guideline recommends or suggests topics to include during an initial psychiatric evaluation. Findings from an expert opinion survey have also been taken into consideration in making recommendations or suggestions. In addition to reviewing the available evidence on psychiatry evaluation, each guideline also provides guidance to clinicians on implementing these recommendations to enhance patient care.

Grit - Angela Duckworth

2016-05-03

In this instant New York Times bestseller, Angela Duckworth shows anyone striving to succeed that the secret to outstanding achievement is not talent, but a special blend of passion and persistence she calls "grit." "Inspiration for non-genius everywhere" (People). The daughter of a scientist who frequently noted her lack of "genius," Angela Duckworth is now a celebrated researcher and professor. It was her early eye-opening stints in teaching, business consulting, and neuroscience that led to her hypothesis about what really drives success: not genius, but a unique combination of passion and long-term perseverance. In *Grit*, she takes us into the field to visit cadets struggling through their first days at West Point, teachers working in some of the toughest schools, and young finalists in the National Spelling Bee. She also mines fascinating insights from history and shows what can be gleaned from modern experiments in peak

performance. Finally, she shares what she's learned from interviewing dozens of high achievers—from JP Morgan CEO Jamie Dimon to New Yorker cartoon editor Bob Mankoff to Seattle Seahawks Coach Pete Carroll.

"Duckworth's ideas about the cultivation of tenacity have clearly changed some lives for the better" (The New York Times Book Review). Among Grit's most valuable insights: any effort you make ultimately counts twice toward your goal; grit can be learned, regardless of IQ or circumstances; when it comes to child-rearing, neither a warm embrace nor high standards will work by themselves; how to trigger lifelong interest; the magic of the Hard Thing Rule; and so much more. Winningly personal, insightful, and even life-changing, Grit is a book about what goes through your head when you fall down, and how that—not talent or luck—makes all the difference. This is "a fascinating tour of the psychological research on success" (The Wall Street

Journal).
