*Dancing About Architecture* - Phil Beadle 2011-06-25

Dancing about Architecture: A Little Book of Creativity is a compendium of outrageous ideas: ideas about how to take more risks, and about how to go about coming up with better ideas. Ideas about how to plan experiences that leave people who are in the same room as those ideas awestruck, and ideas to help you avoid the textbook, the worksheet the barely stifled yawn. From using The Book of Revelation as a planning device; to seeing every experience through the prism of physical activity or song; to measuring a poem to find its real heart; it outlines a methodology that, if you use it, will make you an even greater creative force than you already are.

Become an Idea Machine - Claudia Azula Altucher 2014-12-27

HOW DO I TRANSFORM MY LIFE? The answer is simple: come up with ten ideas a day. It doesn't matter if they are good or bad the key is to exercise your 'idea muscle', to keep it toned, and in great shape. People say ideas are cheap and execution is everything but that is NOT true. Execution is a consequence, a subset of good, brilliant idea. And good ideas require daily work. Ideas may be easy if we are only coming up with one or two but if you open this book to any of the pages and try to produce more than three, you will feel a burn, scratch your head, and you will be sweating, and working hard. There is a turning point when you reach idea number 6 for the day, you still have four to go, and your mind muscle is getting a workout. By the time you list those last ideas to make it to ten you will see for yourself what "sweating the idea muscle" means. As you practice the daily idea generation you become an idea machine. When we become idea machines we are flooded with lots of bad ideas but also with some that are very good. This happens by the sheer force of the number, because we are coming up with 3,650 ideas per year (at ten a day). When you are inspired by an extraordinary idea, all of your thoughts break their chains, you go beyond limitations and your capacity to act expands in every direction. Forces and abilities you did not know you had come to the surface, and you realize you are capable of doing great things. As you practice with the suggested prompts in this book your ideas will get better, you will be a source of great insight for

others, people will find you magnetic, and they will want to hang out with you because you have so much to offer. When you practice every day your life will transform, in no more than 180 days, because it has no other evolutionary choice. Life changes for the better when we become the source of positive, insightful, and helpful ideas. Don't believe a word I say. Instead, challenge yourself to try it for the 180 days and see your life transform, in magical ways, in front of your very eyes.

*Borrowing Brilliance* - David Kord Murray 2009-09-03

In a book poised to become the bible of innovation, a renowned creativity expert reveals the key to the creative process-"borrowing". As a former aerospace scientist, Fortune 500 executive, chief innovation officer, inventor, and software entrepreneur, David Kord Murray has made a living by coming up with innovative ideas. In Borrowing Brilliance he shows readers how new ideas are merely the combination of existing ones by presenting a simple six-step process that anyone can use to build business innovation: ?Defining-Define the problem you're trying to solve. ?Borrowing-Borrow ideas from places with a similar problem. ?Combining-Connect and combine these borrowed ideas. ?Incubating-Allow the combinations to incubate into a solution. ?Judging-Identify the strength and weakness of the solution. ?Enhancing-Eliminate weak points while enhancing strong ones. Each chapter features real-life examples of brilliant borrowers, including profiles of Larry Page and

Sergey Brin (the Google guys), George Lucas, Steve Jobs, and other creative thinkers. Murray used these methods to re-create his own career and he shows readers how to harness them to find creative solutions.

**The Art of Scientific Investigation** - W.I.B. Beveridge 2017-09-25

Elaborate apparatus plays an important part in the science of to-day, but I sometimes wonder if we are not inclined to forget that the most important instrument in research must always be the mind of man. It is true that much time and effort is devoted to training and equipping the scientist's mind, but little attention is paid to the technicalities of making the best use of it. There is no satisfactory book which systematises the knowledge available on the practice and mental skills—the art—of scientific investigation. This lack has prompted me to write a book to serve as an introduction to research. My small contribution to the literature of a complex and difficult topic is meant in the first place for the student about to engage in research, but I hope that it may also interest a wider audience. Since my own experience of research has been acquired in the study of infectious diseases, I have written primarily for the student of that field. But nearly all the book is equally applicable to any other branch of experimental biology and much of it to any branch of science. - (Cambridge, 1957. W.I.B. Beveridge)

Upstream - Dan Heath 2020-03-03

Wall Street Journal Bestseller New York Times bestselling author Dan Heath explores how to prevent problems before they happen, drawing on insights from hundreds of interviews with unconventional problem solvers. So often in life, we get stuck in a cycle of response. We put out fires. We deal with emergencies. We stay downstream, handling one problem after another, but we never make our way upstream to fix the systems that caused the problems. Cops chase robbers, doctors treat patients with chronic illnesses, and call-center reps address customer complaints. But many crimes, chronic illnesses, and customer complaints are preventable. So why do our efforts skew so heavily toward reaction rather than prevention? Upstream probes the psychological forces that push us downstream—including “problem blindness,” which can leave us oblivious to serious problems in our midst. And Heath introduces us to the thinkers who have overcome these obstacles and scored massive victories by switching to an upstream mindset. One online travel website prevented twenty million customer service calls every year by making some simple tweaks to its booking system. A major urban school district cut its dropout rate in half after it figured out that it could predict which students would drop out—as early as the ninth grade. A European nation almost eliminated teenage alcohol and drug abuse by deliberately changing the nation’s culture. And one EMS system accelerated the emergency-response time of its ambulances by using data to predict where 911 calls would emerge—and forward-deploying its ambulances to stand by in those areas. Upstream delivers practical solutions for preventing problems rather than reacting to them. How many problems in our lives and in society are we tolerating simply because we’ve forgotten that we can fix them?

**Creative Thinking Journal** - Shawn Gold 2020-05-07

Creative thinking requires you to change how you think. More than that, creativity requires you to change how you think about thinking. This journal is filled with engaging, creative challenges meant to spark your imagination by prompting you to think in new and unique ways. Each challenge pushes you to rethink how you see yourself and the world around you to uncover new possibilities and ideas. You don't have to be high on cannabis to use this journal though we encourage it as a way to enhance creative flow. You can also try meditation, exercise, music, nature, math, poetry, love, religion, sex, fasting, sleep, play, yoga, mysticism, aromatherapy, baths, dancing, magnets, and space travel.
